

# WHAT ARE DENTAL CROWNS?

Dental crown is a tooth shaped restoration that covers a tooth to restore it back to its shape and function. People commonly call it a cap because it caps a tooth .It is also used to cover the implant. In a case where an implant supported crown is a chosen treatment plan for a patient to replace a missing tooth .

TYPES OF CROWNS : We have the following-

- full metal crowns
- full ceramic crowns
- ceramic fused to metal crowns
- $\frac{3}{4}$  crowns
